**SPIRIT**

## TECH REQUIREMENTS

### **Nut & Bolt Check**

Clean & mark all important suspension/drivetrain/etc nuts & bolts with white paint swipe for visual inspection. This make it easy for you to nut/bolt check before & after each event.

### **Tight Lugs & Secure Battery**

Buy a torque-wrench and learn how to use it. Keep your lugs tight & torqued, and make sure all lugs/wheel studs are present. Make sure your battery is secure. No movement if possible. Buy a mount or make one, as long as it's secure.

### **Fresh Brake Fluid & Leaks**

No point in going fast if you can't stop. If you have a soft pedal, trouble slowing the car down, you may be in need. Fresh brake fluid required. (How to's on YouTube if you'd like to learn). NO LEAKING FLUID.

### **Secure Seat & Proper Belt**

Make sure seat mounting bolts are tight. OEM 3-point with bucket seat is OK. Look up proper harness mounting instructions.

### **HAZZARD Lights & Brake Lights**

Functional Hazzard lights required for signaling exit into pit-lane. Atleast ONE functional brake light - OEM or not is OK.
