#### **Product Description**

Rose Roofing Flexi-Shed Polyester is a polyester based modified bitumen membrane.

#### Type of application

Rose Roofing Flexi-Shed Polyester is intended for use as an economical waterproof covering on temporary portable buildings with pitched roofs, such as garden sheds, kennels, and other non-habitable buildings.

Membranes should be installed in accordance with the manufacturer's guidelines. Application of a suitable underlay is recommended for any building with a pitch of less than 20°.

# Compatibility

The material is compatible with all materials normally used in roofing structures and finishes and may be cut and formed using techniques described in BS8217: 2004. There are no harmful side effects associated with this material. Hydrocarbon solvent based products, such as naptha, paraffin and creosote will have a harmful effect and should not be allowed to come into contact with the material.

## Storage & Handling

Do not drag rolls across rough surfaces, always lift. Rolls should be stored upright on a dry surface. During colder periods it is recommended that rolls are store in a temperature above 10°c for 24 hours prior to use. During storage exposure to direct sunlight is to be avoided. Do not use in temperatures below 5°c. Do not stack pallets 2 high. Rose Roofing is not responsible for any damage when the above instructions are not followed.

Mineral Colours Available Green,

NOTE: Trials have indicated significant differences in the surface temperature between mineral finished. Charcoal on average retained heat up to 10°c higher than mixed brown. For superior UV protection, the lighter mineral finishes have proven more effective.

NOTE: Rose Roofing is continually investigating methods of improving both quality and performance and therefore reserves the right to change specifications and product composition without prior notice.
