

Two-day seminar for PhD fellows and supervisors.

May 13-14, 2019 at Fevik & Froland.

Following the success of last year's seminar held jointly with colleagues at University of Athens we are arranging a second seminar that will be open to all UiA Mathematics PhD fellows and their supervisors.

PhD Fellows who are researching mathematics education in upper secondary school or higher education institutions, and registered at other Norwegian institutions, who are interested to participate should contact simon.goodchild@uia.no.

The guest presenters will be Professor Pat Thompson and Professor Marilyn Carlson from Arizona State University. Pat Thompson has devoted several decades of research within a constructivist framework exploring students' and teachers' mathematical meanings.

The seminar is being organised and financed by MatRIC. It is likely to be of interest to all our PhD fellows, not exclusively those focusing at university level mathematics education.

On day one we will travel to Fevik Strand hotel (about 1 hour from Kristiansand) and hold the first day of the seminar at the hotel. On day two we will combine the seminar with a cultural visit to Frolands Verk where Niels Henrik Abel worked for the last part of his life. We hope to soak up the atmosphere and be inspired to achieve great things in our research!

There will be no charge for participation.

Please register by completing the form at the following link DEADLINE April29, 2019.
