

**PNWH VALVE COVER RACE**  
**Friday - July 5, 2019**  
**Check In - 5:30 pm**

Here's what to do: 1) Find an engine valve cover 2) Add wheels 3) Decorate your valve cover 4) Race it and HAVE FUN!

The Track: Consist of two lanes, each approximately 11" wide, separated by a short railing. The gravity ramp is 16' length, 20-30 degree slope, transition to a flat surface. The start gate stop sticks up from the center of each lane about 2".

Race: Will consist of sudden death (1 run, winner advances) with 2 out of 3 heat final. Heats are determined by hat drawing. First name drawn takes left lane, second the right. Final heat looser chooses lane for successive runs. Drivers will place and align their own racer at the starting gate and the flagman will release the gate. Handicap (approx) is determined by distance a racer extends beyond the starting gate. Crossing the center line before the finish is a disqualification. Judges ruling is final.

Rules: Racers shall have no power source or propulsion system. Racers must be based on actual automotive engine valve covers domestic or foreign. Length shall be no more than 22", a minimum body height or start gate bumper of no less than 2" and overall width of no more than 10". Wheels can be inside or outside of the valve cover. Racers can have four or less wheels on the ground with a maximum diameter of no more than 6". Car weight limit is 10 lbs. Please let Debbie Haley, [deborahhaley@msn.com](mailto:deborahhaley@msn.com) (206-227-9486) that you will be entering.
