Про мотор-колесо Дмитрия Дуонова не слышали только тот, кто при слове "мотор" переходит на другой канал, сайт, программу, перелистывает газетную страницу. Например, предпочитает цветочки или котиков. Но давайте сразу определимся - мотор-колеса Дуонова это лишь цветочки, а ягоды - скажем в унисон народной мудрости, - это асинхронные электродвигатели с совмещёнными обмотками "Славянка". Он эту технологию создал, испытал, получил результат, запатентовал, внедрил и активно развивает уже три десятилетия. Именно здесь Дуонов совершил прорыв. Прорыв этот настолько серьёзен, настолько глобален в мировом масштабе, что изрядно может сделать лучше и комфортнее жизнь человечества в целом. Разработок, на перспективу - море! И, внимание! Ноу-хау в руках нашего человека. То есть, в России рождена глобальная технология с многократно доказанной на практике эффективностью. "Рабочий режим" уже рядом

До Дуонова почти век тому назад были эксперименты, с результатами далёкими от массового внедрения. Вот асинхронные электродвигатели интереса народонаселения нашей планеты. Подчёркнём - без радикальных конструктивных изменений. А их миллиарды, мы с ними сталкиваемся на каждом шагу. Учёные, конструкторы десятилетиями безуспешно пытались повысить КПД, надёжность, энергоэффективность, мощность, ресурс. Стандартный асинхронный двигатель хорош, но человеческая природа требует большего, требует развития, улучшения и модернизации. **Дмитрию Дуонову удалось решить задачу, над которой ломал голову даже великий серб Никола Тесла.**

Естественно, давно сформирована команда специалистов-единомышленников - это конструкторы, технологи, инженеры, электронщики, программисты, станочники-виртуозы. Команда работает, точнее пашет, изобретает, оттачивает и улучшает готовые
