

ROSE ROOFING

BITUMEN ROOF SHINGLES

Rose Roofing Bitumen Roof Shingles are lightweight glass fibre based felt roofing tiles. They are made from bitumen and are similar in nature and use to shed felt but are highly superior.

Shingles are easy to install, and present a highly decorative, long lasting waterproof solution for your roof.

Shingles are suitable for use on any building, temporary or permanent, domestic or commercial, habitable or recreational with a roof pitch from 15° to vertical, but are particularly effective shingles for a shed roof.

Roofing Shingles can be used on a wide variety of buildings, temporary or permanent, and have proved immensely popular with both professional and DIY Installers alike.
