

Patient Information

BreathTek Patient Preparation Instructions

1. The patient should be fasting for at least 1 hour before administering the BreathTek UPT.
2. The patient should not have taken antimicrobials, proton pump inhibitors (such as Dexilant, Nexium, Prevacid, Prilosec, Zegerid, Protonix, Aciphex) or Bismuth preparations within 2 weeks prior to administering the BreathTek UPT. False negative results could occur if PPI's are used within 2 weeks of testing.
3. Drug that is administered for testing, Pranactin-Citric, contains phenylalanine (one of the components of Aspartame).
4. Testing cannot be performed on any patient less than 18 years of age.
5. Baseline and Post-dose samples will be collected.
