

CLIMATE NEUTRAL CERTIFICATION

The environmental impact of products in the food sector is becoming increasingly more important. At Neuteboom, we are aware of the CO₂-emissions of our coffee products that bear the Climate Neutral logo.

We make a conscious effort to reduce these emissions and compensate for the emissions that can't be reduced yet. With the **Climate Neutral Group's (CNG) Climate Neutral Certification program**, we make sure that our environmental policy – which is structurally anchored in our organization – corresponds with international environmental agreements.

By installing a more energy-efficient coffee roaster and by using green energy and gas, we have started our journey to reduce our CO₂-emissions with 25% by 2030.

The measures that we take to minimise our emissions include a combination of Gold Standard- and VCS Cookstoves and VCS REDD+ Forest projects in coffee producing countries. All of our measures are reviewed annually based on criteria from an independent Certification Body. This means that Neuteboom can use the Climate Neutral Certified label for our customers' products that have opted for CNG's certification program.
