What is the application process?

Typically, universities require three As at A-level, including biology or chemistry, an International Baccalaureate of 38 and an IELTS score of 7.0 for undergraduate medicine degrees.

Most medical degrees also use one of three admissions tests. While some universities use the GAMSAT or BMAT test, the majority of UK medical schools use UKCAT (UK Clinical Aptitude Test), which you must register for and sit before making a UCAS application.

How long does it take to graduate?

Medicine degrees in the UK normally last five years, though for some universities it can be six.

What is the course structure?
